Q1. Define operating system

Ans :An operating system (OS) is the program that, after being initially loaded into the computer by a boot program, manages all of the other application programs in a computer. The application programs make use of the operating system by making requests for services through a defined application program interface.

Q2. Define Server operating system?

Ans : A server operating system (server OS) runs on a server in a client-server architecture and provides multiple services to client machines within the network. It forms the software backbone to run various programs and applications.

Q3. Write two differences between desktop operating system and Server Operating System?
